4354 AMERICAN PHILOSOPHICAL SOCIETY. PROCEEDINGS. Vol. III (1843), and from vol. V, no. 47 (1851), to vol. XXXVI, no. 155 (1897);—96 nos., 8vo. (as described below), *with plates; a few nos. missing; sd.* *Philadelphia*, 1843-97 4 10 0

Vol. XXII. part III (875 pages), consists of a condensed edition of the Proceedings of the Society from 1744 to 1838, a circumstance which renders the above described lot more nearly complete than it would at first seem. This part can be had separately, price 7*s* 6*d*. The intermediate numbers missing are, 50, 53-56, 58, 76, 128, 129, 134, 135, and 137-139.

4355 ANDERSON (John). ANATOMICAL and ZOOLOGICAL RESEARCHES; comprising an Account of the Zoological Results of the two EXPEDITIONS to WESTERN YUNNAN, 1868-75; with a Monograph of the two Cetacean Genera: PLATANISTA and ORCELLA. 2 vols., impl. 4to., *with* 85 *plates* (49 COLOURED); *cloth* (*subscription price*, £10) 1880 2 0 0

The commercial and political value of Yunnan as a rich Chinese province on the borders of India and Burma, has immensely increased since the annexation of the Burmese empire. It is not only the door of communication between British India and China, but is in itself a territory of great natural wealth, destined to become more and more important as the relations between the two empires attain a greater development.

100 copies were printed of which 95 were for sale; but few remain.

Purchasers of the above do not bind themselves to take further volumes, but they will have the privilege of securing them if so inclined.

"The first step towards the preparation of this volume was the formation of a collection of the Reptiles and Batrachians of Egypt. This was an absolute necessity, as these groups were evidently so poorly represented in the Museums of this country and in those of Europe, that it would have been impossible to have derived from them any just conception of the extent of these constituents of the Egyptian Fauna. Moreover, in Great Britain, as on the Continent, it was a rare circumstance to find a specimen with any more definite locality assigned to it than 'Egypt,' 'Nubia,' or the 'Sudan.'

"In forming the Collection which was to serve as the basis of this volume, an endeavour was made to obtain as many specimens as possible from a diversity of accurately ascertained and registered localities, distributed over as wide an area as possible.

"While in Egypt, in 1892, I drew up a Memorandum, pointing out the lack of

£ s. d.

information that existed regarding the Fauna of the country generally, but more especially of the Mammalia, Reptilia, and Batrachia; and further, to make this Circular as useful as possible, it was translated into Arabic through the courteous assistance of Colonel Sir Colin Scott Moncrieff, at that time Director of Irrigation, who also aided me in its circulation. Those who favourably replied to the Memorandum were furnished with the necessary materials for collecting, and with full instructions for the proper preservation of the specimens.

"Nearly five years were devoted to collecting, with the result that over 1500 specimens of Reptilia and Batrachia were brought together, of which more than 1400 were permanently preserved. The greater part was presented to the British Museum; another set, all but complete, was also presented to the Museum of the Egyptian Government School of Medicine in Cairo, and a few of the more important species were given to some of the Museums in Europe."—*The Author's Preface.*

"When, some six years ago, Dr. Anderson undertook the investigation which has resulted in the noble work now published, our knowledge of the herpetological fauna of Egypt was very meagre indeed, and could not compare with that of the neighbouring countries such as Tunisia, Algeria, and Syria. A list of the reptiles and batrachians of Egypt showed an imposing array of species, many of which now prove to be merely nominal, but these were represented in museums by a small number of specimens, few of which bore indications of exact localities. In fact, such material as then existed was quite inadequate for a study of the distribution as required by modern zoology, and the most important subject of variations and delimitation of species could not be attacked. The author's first task was therefore the bringing together of a large number of specimens, from as many parts of the country as possible, and this was carried out by him with extraordinary energy during successive visits to Egypt in the winters 1892 to 1895, his personal investigations extending even to Suakim, beyond the limits of Egypt proper. Not only did Dr. Anderson himself and with the help of natives succeed in collecting a very large series of specimens, many of which were brought home alive, and could be sketched in natural colours and attitudes, but he was also fortunate enough to enlist the co-operation of many residents and visitors interested in Natural History matters; the result being the splendid collection, the bulk of which has been presented to the British Museum, a second, nearly complete set, having been reserved for the Museum of the Egyptian Government School of Medicine at Cairo." —*Nature*, Dec. 29th, 1898.

4358 ANDREWS (H. C.). COLOURED ENGRAVINGS OF HEATHS. The Drawings taken from Living Plants only. 4367	AUDUBON (J. J.). THE BIRDS OF AMERICA. 4 vols., atlas folio, *the* ORIGINAL ISSUE, 435 *superbly coloured plates, containing life-size representations* 1827-38 ORNITHOLOGICAL BIOGRAPHY, or Descriptions of the Objects represented in the Work entitled The BIRDS of AMERICA. 5 vols., roy. 8vo. 1831-39 —— together, 9 vols., *uniformly bound in half blue morocco, by* LEWIS 1827-39	350	0	0

The above is a copy of the first issue, the numbering of the plates of the *first* volume being almost entirely in Arabic numerals.

Audubon, by birth an American, was the son of a Frenchman. His indefatigable pursuit of knowledge, his enthusiastic devotion to the science of ornithology, his keenness of insight, have rendered his name for ever famous as that of one of the greatest naturalists the world has seen. With Buffon, Cuvier, and Owen, he occupies a front rank from which no later investigator can dethrone him; and at the same time he holds a position of no small importance as one of the literary celebrities of the New World.

4368	——— the same. *A Selection of* 259 COLOURED *plates (as detailed below); recently bound in six vols., atlas folio, with printed title to each volume, half russia, very neat* 1827-60	21	0	0

CONTENTS: plates 1 to 120 and 24 others of the original engraved issue, coloured by hand, and 115 plates (on 75 sheets) of the chromo-lithographic reprint.

A very cheap collection for a working naturalist; the binding alone cost as much as the book is priced.

4369	——— ORNITHOLOGICAL BIOGRAPHY, or an ACCOUNT of the HABITS of the BIRDS OF AMERICA. 5 vols., roy. 8vo., *bds., uncut Edinburgh*, 1831-39	3	16	0
4370	——— the same. 5 vols., roy. 8vo., *half calf* 1831-39	4	12	6
4371	——— the same. 5 vols., roy. 8vo., *half brown morocco neat* 1831-39	5	5	0
4372	——— the same. 5 vols., roy. 8vo., *with* PROOF PORTRAIT (AUTOGRAPH *affixed*) *inserted; calf extra, by* CLARKE 1831-39	7	0	0

This last is the author's presentation copy to William Yarrell.

4373	——— and J. BACHMAN. THE VIVIPAROUS QUADRUPEDS OF NORTH AMERICA. 3 vols. in 2, atlas folio, 150 *superbly* COLOURED *plates* The DESCRIPTIVE TEXT. 3 vols., roy. 8vo., *with plates* 151-155, *which were never issued in folio* —— together, 5 vols., *uniformly bound in half russia New York*, 1845-54	32	0	0
4374	——— the same. 5 vols., *russia gilt, the larger vols. rebacked* 1845-54	35	0	0

Containing an interesting memorandum dated Sept. 8, 1830, in the autograph of, and signed by, J. J. Audubon, commissioning John Calvert of Leeds to obtain subscribers to his great work on the birds of America.

4375	——— another edition. 3 vols., impl. 8vo., *with* 155 *coloured plates; calf gilt London, Wiley and Putnam*, 1847 *—New-York, V. G. Audubon*, 1851 *—New-York, V. G. Audubon*, 1854	21	0	0

An early copy like the above is greatly to be preferred on account of the superior strength and clearness of its illustrations.

AUDUBON, *continued*:— £ s. d.

	The author printed the first three volumes for presentation to his friends. The			

work interrupted by the author's death, was completed from the materials left by him, by Sir Joseph Dalton Hooker, a fourth volume containing plates 412-600 being published.

Several copies of the last volume having passed into my hands, I would urge upon the possessors of the first three volumes the necessity of immediately obtaining the fourth, as the remaining two or three copies of that volume will soon be exhausted. No more can ever be produced, as the copperplates were sold as old metal.

"The work is published in quarto in sumptuous style, is unexceptionable in typography and profusely illustrated. Besides 46 plates of some of the best chromolithographs of butterflies which we have ever seen, there are 129 woodcuts scattered through the text, generally illustrating special structural features, especially in neuration and leg structure, which are of the greatest value. . . . It remains only to say that a good deal of interesting reading will be found scattered through the portly

volume, and that there are points in the preface worthy of careful attention. About 500 species are described."—*S. H. Scudder.*

In this work is given a monographic revision and synonymic catalogue of the butterflies of the Malay Peninsula, including the islands of Penang and Singapore. The fauna of the western side of the Peninsula is at present best known, and is here principally treated ; this area extends from Quedah to Johore.

"Whatever may be the verdict of posterity on Garrod's physiological work, no doubt can exist as to the value of his zoological labours. The facts alone recorded in his various papers on this subject must always remain as a great and incontrovertible addition to our knowledge of the highest vertebrata."—*Biographical Notice.*

	"Mr. Haité's 'Plant Studies,' the first instalment of which has just been published by Mr. Quaritch, have a good object. He has evidently been shocked, as who			

£ s. d.

has not? by the incorrect and even reckless delineations of plants and flowers which are seen in so many art productions of the present day. Perhaps the most terrible sinners in this respect are the concocters of Christmas cards. Not merely for these, however, but for all the designers and workers in wood, metal, stone, pottery, and glass, Mr. Haité provides a sketch-book such as each artist might wish he had made for himself, in which are exhibited, life-size, the foliage, flower, and fruit of the fifty plants which he considers best adapted to decorative purposes. The garden pea, nasturtium, apple, Canterbury bell, and sunflower have each a plate in the present number, and the drawing is so good that it is to be hoped it may find its way into the hands of many professionals as well as amateurs."—*Pall Mall Gazette.*

4789	——— FLORA OF BRITISH INDIA. 7 vols., 8vo., *a used copy (subscription price, £12 net)*, £7. 10*s*; or, *in cloth, new and fresh* 1875-97 The *Flora of British India* comprises brief descriptions, ordinal, generic, and specific, of the flowering plants and ferns found within the British territories in India, together with those of Kashmir and Western Tibet. "The 'Flora of British India' is a work to which Sir J. D Hooker has devoted many years of his life, and it is chiefly written by him, portions having been contributed by other botanists, amongst whom are Mr. Thiselton-Dyer, Mr. C. B. Clarke, Dr. Maxwell T. Masters, Mr. J. G. Baker, and the late Dr. T. Thomson and Dr. T. Anderson. The undertaking may be said to have commenced originally by the publication of the first (and only) volume of Hooker and Thomson's 'Flora Indica' in 1855; but the present work, which is on a smaller plan, has been brought out in parts, of which the first appeared in 1872, and the last, containing the index, in November, 1897. The whole consists of seven thick octavo volumes, comprising altogether over 5000 closely printed pages, and containing descriptions of 14,520 species."—*Nature*, July 14th, 1898.	8	10	0

This work is a history of the birds of Celebes and the surrounding islands, such as Talaut, Sangi, Sula, Togian, Saleyer, and geographically it adjoins and forms a western continuation of Count Salvadori's famous *Ornitologia della Papuasia e delle Molucche*. A series of maps illustrates the geographical distribution of certain genera, the meteorological conditions of the archipelago, etc. Not only the rich collections from the localities in question in the Dresden Museum, but also the fresh ornithological results of the travels of Drs. P. and F. Sarasin and of others, have been at the disposal of the authors, so that they have been able to give a fairly complete picture of the avifauna of this province, upon which they were at work for four years. Attention has been paid to the affinities of the species, local races, habits and, where possible, migration, local wanderings, and questions of variations and geographical distribution.

"During the preparation of the work, I have constantly kept in view the fact that we have traversed unknown regions of the earth, regions which will not probably be visited again for some time to come. All observations made by us having thus an additional value, I have thought it right that everything should be worked up with the greatest possible care, and nothing be left out which might prove of the slightest interest. Being aware that this will probably for a series of years hence form a standard work as regards our knowledge of the North Polar Basin, I am trying to make all information as trustworthy as possible by giving in most cases the original observations and material in full, so that the reader may be able to judge for himself how far the results or the conclusions drawn are reliable, or may be able to draw his own conclusions. . . . The whole work is estimated to form five or six quarto volumes, which it is hoped will be finished in the course of about two years."—*Extract from Dr. Nansen's Preface.*

5156	——— the same. 4 vols., impl. folio, *finely half bound in crushed red Levant morocco extra, gilt tops, uncut* 1888-94 The growing popularity of orchids, the ever-increasing demand for information respecting them, and the indifferent serial works relating to this lovely and important class of plants hitherto published, have furnished sufficient reasons for this great work. It was the aim of the authors to represent truthfully the natural aspect of the plants, which are drawn life-size, and in addition to the coloured illustrations, scientific drawings of the structural parts of the flowers have been given when desirable. Some of the plant-portraits are coloured by lithography, others are hand-painted, as was found expedient. To the detailed information respecting each plant are added practical notes on its culture. It was the intention of the authors to illustrate all classes of the orchid family, and species and varieties of garden value, whether old or new, have found a place in the work. A large number of the earlier parts having been long out of print, the complete work is now very scarce.	32	10	0

"Dr. SCLATER and Mr. HUDSON have combined their forces to produce one of the best books ever written on South American Ornithology. Each is a master of his own portion of the subject, for no one is better acquainted with Neotropical Ornithology than Dr. SCLATER, and Mr. HUDSON has been known for many years as one of the best living observers of the habits of birds in the field. The scheme of the book, therefore, leaves nothing to be desired, and the whole of the 'get-up,' as regards paper, print, and illustrations, renders it as good as it is possible to be, and reflects the greatest credit on the publisher."—*Nature.*

	The above work during its course of publication gained the highest praise in every quarter, from its combining three things of the highest importance but seldom found together—great scientific value, eminent readableness, and singular beauty of illustration. It can, in fact, be only compared with the great works of GOULD and SELBY, which being on so much larger a scale, from containing nearly life-size portraits of the birds themselves, are beyond the reach of most students of British ornithology, even with the aid of a great public library.

	The books which have been written on British birds, from the first edition of Bewick in 1797, down to Saunders's Manual in 1889, are legion, but in very few of them are the eggs of british Birds illustrated.			
	The first edition of Hewitson's British Oology was begun in 1831, and the last was finished in 1856. The plates were coloured by hand, and are most of them good; but all three editions have long been out of print, and, indeed, much of the letterpress is out of date.			
	SEEBOHM'S *History of British Birds* is enriched with chromo-lithographic illustrations of the eggs; but the letterpress alone fills three thick volumes, consequently the work is expensive; moreover, it will soon be out of print. Furthermore, in the ten years which have elapsed since the plates were produced, the art of printing in colour has made great advancement.

5309	——— A Natural History of the British Lepidoptera. Vol. I. 8vo., *pp.* iv, 560; *cloth* 1899 "In submitting this volume to the entomological public, the author trusts that the method of treatment will commend itself. The recent work that has been accomplished in the classification of the Lepidoptera by Chapman, Dyar, Packard and others, has rendered a radical rearrangement necessary. In commencing with the more generalised, and proceeding to the more specialised, superfamilies, the author considers that he has adopted a logical course that will meet with the approval of those best qualified to judge in this matter. It has been considered better to complete thoroughly a few superfamilies rather than to attempt to deal with a large number superficially, and it is hoped that the separate treatment of the main points in the life-history of each species dealt with, will be of advantage to the various classes of entomologists—synonymists, systematists, biologists, and those that study the subject under its geographical, or any of its philosophical appects."—*Preface.*	1	0	0
